Daily Challenge Happy Coding from necse SKILLRACK

String Alphabets Position Sum

Given an input string S of length L containing only lower case alphabets, the program must print the sum of the positions of the alphabets. Position of a is 1, b is 2 and so on till z whose position is 26.

Boundary Conditions:
1 <= L <= 100

Input/ Output Format:
Input:
The first line contains the value of String S.

Output:
The first line contains the sum of positions of the lower case alphabets in S.

Example Input/Output 1:
Input:
abca

Output:
7

Explanation:
The sum of positions is 1+2+3+1 = 7

Example Input/Output 2:
Input:
azd

Output:
31

Max Execution Time Limit: 5000 millisecs

Ambiance

Java (12.0)

```
1  import java.util.*;
2  public class Hello {
3
4      public static void main(String[] args) {
5
6          Scanner sc = new Scanner(System.in);
7
8          int res=0;
9          for(char i:sc.nextLine().toCharArray()) res+=(i-'a'+1);
10
11         System.out.println(res+"");
12
13     }
14 }
```
